

01 THE CONCIERGE

Stu meets your Store.

An AI food concierge that turns what your shoppers want into a cart they can check out.

Stu lives inside your storefront. A shopper asks for what they want, like *dahi* or *biryani* for six, and Stu builds a cart out of your own catalogue. One button fills the basket. Nothing to rebuild.

A shopper asks, **Stu builds the cart**, right there on the storefront.

STEP 01

A shopper asks

"Dahi, biryani for six, a week of light dinners." In their own words.

STEP 02

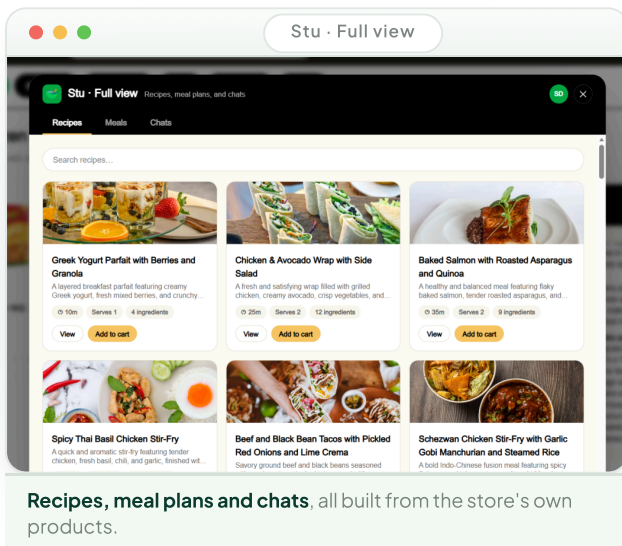

Stu builds the cart

Using your products, at your prices.

STEP 03

They check out

On the store you already have. Live in weeks, not months.

Recipes, meal plans and chats, all built from the store's own products.

02 THE OUTCOME

Recipes, Meal Plans, Grocery Lists

Because Stu starts from a recipe or a plan, baskets get bigger.

One dinner turns into a full recipe's ingredients. A week of meals turns into a week's cart, priced in your currency. All of it comes out of your products and goes straight into the cart, so nobody walks away empty handed.

03 SEE IT WORK

Live Demo

Two ways to see Stu in a real storefront. Scan the code with your phone, or just click the link.

Try the live store

journs-store.shayaan0303.workers.dev

Talk to Stu, watch the cart fill itself.
